## TEN-YEAR INFLATION TRENDS

Over the past decade, the annual rate of inflation exhibited significant variability, reaching a ten-year low of -1.4 per cent in July 2020 and peaking at 5.1 per cent in September 2022.

**FIGURE 3: ANNUAL RATES OF INFLATION – YEAR-OVER-YEAR PERCENTAGE CHANGE, SEPTEMBER 2015 – SEPTEMBER 2025**

(APRIL 2015 = 100)

The annual average percentage change for the period 2015–2024 shows an overall upward trend in average price levels, with the highest annual average increase recorded in 2022 at 4.0 per cent. Since then, the annual average rate of increase has slowed, falling to 3.3 per cent in 2023 and further to 1.9 per cent in 2024. This indicates a continued moderation in the average rate of price growth following the post-pandemic peak.

## COMPUTING PRICE INCREASES

The Department of Statistics receives calls daily requesting the rate of inflation over specific periods of time. The following calculations are provided to guide users as to how to compute rates of price increases. The monthly index numbers can be obtained from our website: <https://www.gov.bm/bermuda-business-statistics>.

### Month-to-Month Price Change

The price change between February 2022 and January 2022 is calculated as follows:

$$\begin{aligned}
 &= \frac{\text{Feb 22 index} - \text{Jan 22 index}}{\text{Jan 22 index}} \times 100 \\
 &= \frac{109.0 - 108.6}{108.6} \times 100 \\
 &= 0.4\%
 \end{aligned}$$

### Year-to-Year Price Change

The price change between March 2022 and March 2021 is calculated as follows:

$$\begin{aligned}
 &= \frac{\text{Mar 22 index} - \text{Mar 21 index}}{\text{Mar 21 index}} \times 100 \\
 &= \frac{109.4 - 106.7}{106.7} \times 100 \\
 &= 2.5\%
 \end{aligned}$$

### Particular Period Price Change

The price change between February 2022 and March 2020 is calculated as follows:

$$\begin{aligned}
 &= \frac{\text{Feb 22 index} - \text{Mar 20 index}}{\text{Mar 20 index}} \times 100 \\
 &= \frac{109.0 - 105.9}{105.9} \times 100 \\
 &= 2.9\%
 \end{aligned}$$

## WHAT IS THE CONSUMER PRICE INDEX?

The CPI is a statistical tool used for measuring changes in the general level of prices of consumer goods and services purchased by private households.

The index measures price movements of a given quality and quantity of goods and services. The mix of these consumer goods and services comprising the index, is figuratively thought of as a “shopping basket.” In constructing this “shopping basket”, the selected goods and services are organized first by commodity type. They are then divided into sub-components and assigned to a major expenditure group. The Bermuda CPI is structured into nine expenditure groups or sectors:

- Food
- Rent
- Clothing & Footwear
- Tobacco & Liquor
- Fuel & Power
- Transport & Foreign Travel

## CONCEPTS AND DEFINITIONS

### BASE PERIOD

The period used as a reference point for measuring the price change of goods and services. The base period for the Bermuda CPI is April 2015.

### COST OF LIVING INDEX

Many individuals refer to the CPI as a cost-of-living index. The CPI is an index of pure price change only. A cost-of-living index reflects the changes in buying or consumption patterns that consumers would ordinarily make to adjust to any change in the price of a good or service.

## INFLATION

Inflation is the process of rising prices, resulting in diminishing purchasing power of a given sum of money.

### LASPEYRES EQUATION

The CPI is computed using this statistical equation. This formula calculates the total amount of money a household needs today to purchase the same basket of goods and services that it bought in the base period, April 2015.

### PRICE INDEX NUMBER

A single figure that shows how a set of prices has changed over a specified period. An index number alone means nothing. It must be compared with an index number from another period to have meaning. For example, a comparison of the index number 97.2 for January 2014 with 100.4 for January 2016, reveals that prices have increased by 3.3 per cent.

### WEIGHTED AVERAGE

A mathematical formula that takes into account the relative importance of an item's price change compared to the overall change in the sector or CPI.
